

OTM Skin Saline Solution Tattoo Removal Patient Profile

The Saline Solution tattoo removal treatment targets and fades the tattoo ink material. A great alternative to laser tattoo removal. This treatment is only recommended for tattoo's the size of a business card or smaller.

For the best tattoo removal results, clients must follow these instructions prior to coming in for laser tattoo removal:

1. Clean and shave the area with soap and water and do not use any products, creams, or lotions, except sunblock on the area prior to treatment.
2. Protect the area from sun exposure on the day of treatment. Use SPF50 sunscreen, bandage the area being treated and/or thoroughly cover the area. A long-sleeved t-shirt is sufficient cover. Tanned skin and skin exposed to direct sunlight will interfere with the laser beam penetrating the tattoo pigment and could burn the skin.
3. Medication verification: make sure you are not taking any blood thinners medications or aspirin for 72 hours prior to saline solution treatment. If you are unsure about a medication you are taking, ask your doctor or a pharmacist whether it is blood thinning.
4. Following the post-treatment instructions is very important to get the best results, please read them carefully after treatment.
5. Stay Hydrated. Consume the recommended daily water intake to keep your body and skin hydrated before and after treatment.

Depending on the ink material, a full removal may require several treatment sessions for optimal results.

Possible side effects are:

1. Loss of normal skin color over the tattoo site, especially of the more colorful tattoos.
2. Some residual tattoo material remaining even after treatments.
3. Mild texture change or very rarely scarring in the tattoo site.
4. Darkening in the area or surrounding tissue.

A free 15-minute consultation with an OTM Skin professional will be provided and required prior to any appointment. At this time, we will create a patient profile and individualized treatment plan to meet your tattoo removal needs. Please contact OTM Skin with any questions or concerns.
